

Bearing Isolators for PD Pumps

SPX has available **optional Bearing Isolators** for Universal I, II, UL and 5000 series PD pumps. These isolators are available on new pumps or may be used on existing pumps in the field. They replace the standard grease seals in the front of the pump gear case. Bearing Isolators are recommended for installations where contamination of bearings may cause premature failure. Examples are installations where leaking product seals are not serviced promptly and/or from high pressure cleaning spray. They can also provide an extra barrier to prevent product from working back into the pump. Examples include dough or sugary products.

These isolators are bronze with Electroless Nickel Plating and have Viton O-rings. The Kits include isolators already installed in bearing retainers, tube of silicone sealant, and installation instruction sheet 95-06001.

Pump Series and Model	Isolator Kit P/N w/ Zinc Plated Bearing Retainer	List Price	Isolator Kit P/N w/ Stainless Steel Bearing Retainer	List Price
U1 & 5000
